ROAD & TRACK

Porsche 997 GT3 RS Club Race Kit

The all new Porsche Club Race package is a pure racing breed with its DNA inextricably linked to our enviable motorsport expertise at Öhlins Racing.

The package is a unique combination of a 46 mm, two-way adjusted front mounted shock and a light weight 36 mm shock with an integral reservoir in the rear.

The TTX46 CR Club Race Strut has a forged cylinder head and is two-way adjusted, which separates it from the TTX46 CR. As the piston is solid, all adjustments are made through these adjusters. Use the TTX46 CR Club Race together with the TTX36, they make a perfect match. The TTX36 is a Twin Tube inline damper, two-way adjusted, one-way rebound and one-way compression. One of the advantages with this damper is the integral reservoir that makes it very compact.

FEATURES

Front - TTX46

- > 46 mm solid piston twin tube through rod damper
- > 30 mm shaft
- > Compression and Rebound adjusters
- > Fully pressure balanced
- > High end performance

Rear - TTX36

- > 36 mm solid piston twin tube damper
- > 14 mm solid shaft
